

GitHub-Ready aiRoutes.js

Prepared from the uploaded Express router. It protects the AI routes with the auth middleware and exposes the weather summary and recommendation endpoints.

```
const express = require('express');
const router = express.Router();
const { getWeatherSummary, getWeatherRecommendation } = require('../controllers/aiController');
const { protect } = require('../middleware/authMiddleware');

router.use(protect);

router.post('/weather-summary', getWeatherSummary);
router.post('/weather-recommendation', getWeatherRecommendation);

module.exports = router;
```

GitHub upload: save this as **aiRoutes.js** in your routes folder. No hard-coded credentials are present in this file.
