

GitHub-Ready db.js

Use the following version of db.js for your GitHub project. It keeps the MongoDB connection string in the environment variable MONGO_URI.

```
const mongoose = require('mongoose');

const connectDB = async () => {
  try {
    if (!process.env.MONGO_URI) {
      throw new Error('MONGO_URI is not defined in environment variables');
    }

    const conn = await mongoose.connect(process.env.MONGO_URI);

    console.log(`MongoDB Connected: ${conn.connection.host}`);
  } catch (error) {
    console.error(`Error connecting to MongoDB: ${error.message}`);
    process.exit(1);
  }
};

module.exports = connectDB;
```

.env (keep this file private)

```
MONGO_URI=mongodb://127.0.0.1:27017/weatherwise
```

.gitignore

```
node_modules/
.env
```

Do not upload your .env file to GitHub, especially if it contains a MongoDB Atlas password or other credentials.
